

Virtual Exhibit 5.0

Share highlights of your collection and promote your exhibits online with Virtual Exhibit!

Virtual Exhibit (VE) is an affordable and simple solution for sharing your collections on the World Wide Web. You select the records, images, and data fields you would like to share right in PastPerfect with a few mouse clicks. It will automatically convert the selected files into HTML for you, which you then upload to your Web server. No HTML programming knowledge is required to create informative, attractive and easy-to-navigate online exhibits. Virtual Exhibit comes with built-in Web page templates and color schemes to make designing your exhibits quick and easy. Since VE is based on industry standard Cascading Style Sheets (CSS), the possibilities for customization by your Web design experts are endless.

Virtual Exhibit allows you to create and publish active exhibits, while at the same time planning future exhibits, and saving past exhibits. Use the optional custom fields to include interpretive descriptions for each item to make telling a story with your collections a breeze. If one of your goals is to have an online presence, Virtual Exhibit is a great tool for the job.
