

Barcode Printing for PASTPERFECT

When you're ready for barcode printing, PastPerfect is ready too.

- ✿ **CREATE** barcode labels for your collection items.
- ✿ **SCAN** your PastPerfect object ID numbers for instant access.
- ✿ **TRACK** your museum collections with unprecedented accuracy and speed.
- ✿ **INVENTORY** can be fast and easy with barcode labels and a barcode scanner.

The Barcode Printing Upgrade allows PastPerfect to print barcode labels in a variety of formats. The most common barcode formats are Code 128 and Code 39. PastPerfect supports these and other standard barcode formats.

Hardware Requirements

You will need a good printer and a barcode scanning device. Barcode labels can be printed on any standard high quality LaserJet or inkjet printer. To ensure that the labels can be easily read with the scanner, they should be printed at 600 dpi or higher.

Scanners come in three basic styles: wand, CCD, and Laser. The **Laser** has the ability to scan labels from a distance of one or two feet. The **CCD** (Charged Coupled Device) scanners work from a distance of about 1" or less. We recommend these types of scanners over the wand scanner.

The Barcode Printing Upgrade requires PastPerfect 3.0 or higher. It is priced at \$95 or \$76 for AASLH Institutional Members.

Barcode Printing takes your museum to the next level of inventory control and tracking.

Barcode printing is a proven technology that can eliminate keyboard data entry errors. Barcode printing has many possible applications in the museum setting for tracking the movement and location of items.

Sample Barcode Label

Barcode Printing can also create PostNet formatted labels for bulk mailings.

PastPerfect will also print the PostNet format used by the US Postal Service to encode ZIP code information for automatic mail sorting. Devised exclusively for use by the United States Post Office, this format encodes an address zip code plus the additional zip+4 numbers and the two-digit carrier route.
